

MS Cadastral Framework

Data Disclaimer

October 2026 Release

In accordance with MDEQ guidance and requirements, MS Geographic Information, Waggoner Engineering, Tri-State Consulting Services, Inc, and various county tax offices compiled and developed MDEM Cadastral Framework Data Layer for all 82 Mississippi counties including parcel polygons and center points of those polygons with all available data therein. This data contains over 40 attributes for each parcel.

The information provided in these County Parcel Data files do not, and are not intended to, constitute legal data; instead, all information, content, and materials available in these files are for general informational purposes only. There are no restrictions on the use of this data distributed by MARIS. This data may not constitute the most up-to-date legal or complete information. This data may differ from the individual County's data distributed directly from that county, the difference being that county's data set may have additional attributes not included in the MDEQ statewide dataset. For the most up-to-date and complete county parcel data, the viewer should contact the specific county's Tax Assessor/Collector office to acquire that data.
