Review Process: GIS System Roads Attributes

Purpose:
  This procedure is used to define the column attributes in the OSARC System Roads file. This document
  was created for users of the data to understand the truncated column headings meanings.

Documents/Software Required:
  1. QGIS Version 3.22

Tolerance:
  The tolerance is not applicable.

Procedures:
  1. The following table presents the definitions of the column heading attributes:

Column Name	Description
FID	Unique identifier or Key autogenerated from QGIS
County	The road is located in the county identified here
Length_mi	Length of the road segment in miles
Book_No	OSARC internal historical document relationship identifier
Rd_OSARC	Official OSARC System Road Name
Rd_Name1	Actual road name identified on Google Maps. An OSARC System Road may contain multiple real road names/segments on Google
Rd_Name2 to Rd_Name12	Additional road names identified on the OSARC System Road segment
Rd_Name_Com	The concatenated road names combined into one field for ease of user filters and searches. This field contains Rd_Name1 to Rd_Name12 combined.
Date_Add	Date the OSARC System Road was officially added to the OSARC system
DAte_LastRev	The date the existing road was officially modified
OSARC_ID	OSARC System Road internal identification
Legal_Desc	The legal description of the OSARC System Road. The description provides a physical description of the route.
