

Connecting to the MARIS ArcGIS Server from ArcPro

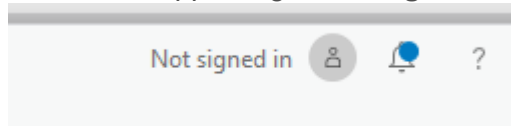

Updated 9/3/2024 – Cleaner Method

NOTE: ESRI Best Practices now recommend not allowing anonymous connections to an ArcGIS Server. They suggest using Viewer user accounts.

To request an account, please contact Steve at swalker@mississippi.edu

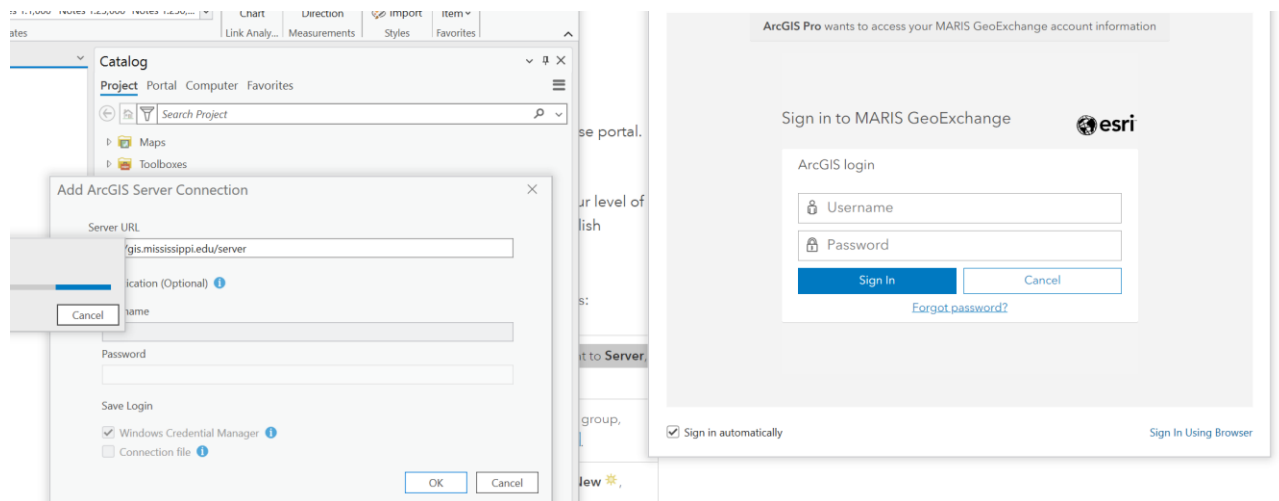

Connecting to MARIS ArcGIS Server

1. Open a Map Project in ArcPro
2. Click on the Upper Right **Not Signed in**

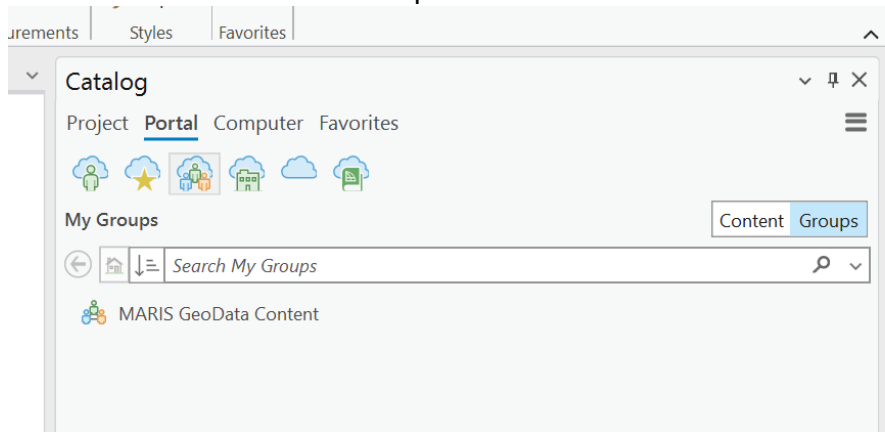

3. Sign In to the MARIS Geo exchange → <https://gis.mississippi.edu/portal>
4. Click **Sign In**

Use the Username and Password I sent

5. Click on the **Catalog** Pane

6. Click **Portal** then Click on Groups Icon

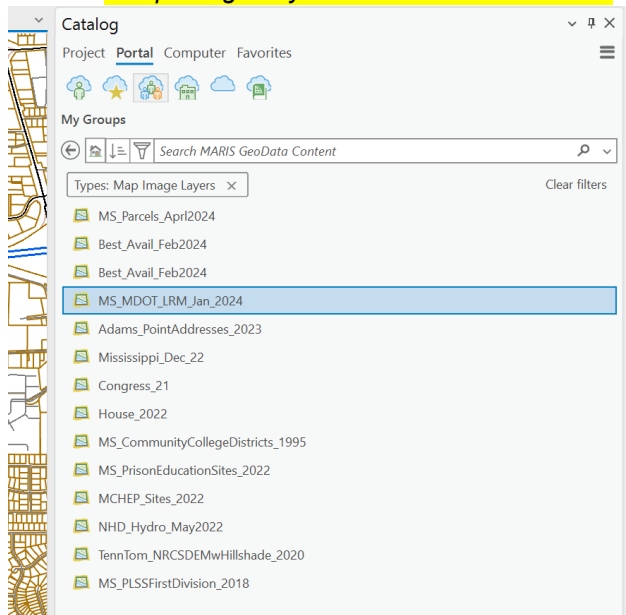

7. Click on **MARIS GeoData Content** – this gives you Searchable access to pull in all MARIS feature layers and services
8. You can use various Search options

9. Use the Filter Tool to Select Based on Type such as:

Maps, Layers (Feature, Tile, Map, Imagery, Layer Files), Map Extent, Date Create, etc .

NOTE: Map Image Layers are the WMS Services

**** PLEASE let us know of any tips/trick or suggestions to these instructions. ****
